

Assignment Tracker Web App

Final Presentation

Presented by Ben, Emma, Nico, Luis &
Augustine

Problem

We're solving the problem of

- having to search documents and classroom pages to find due dates
- having to rely on clunky built-in calendars on applications like Blackboard to track due dates

Who's it for?

- Students in high school or higher education needing to keep track of
 - important dates
 - assignments in one cohesive place

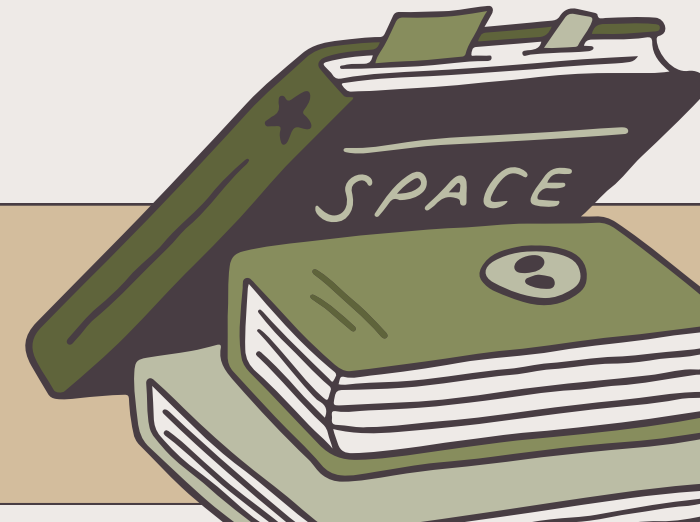

Solution

Why is it valuable?

- A student tries to rely on built-in learning platform trackers for assignments
 - Some instructors keep due dates in documents that aren't tracked
 - Students have a lot of things on their plate and feels overwhelmed
- Assignment Tracker helps the student tackle these issues
 - Stores the student's assignments all their classes in once place
 - The student sees all their deadlines at a glance through color coding
 - Notes and links are added to assignments for effortless retrieval

Key Features

- **Account Creation**

- Allows users to create a customizable profile that is secured by a login screen.

- **User Dashboard**

- Hub for all assignments and profile information.

- **User Profile**

- Users can view their username
- Users can view and edit their profile picture

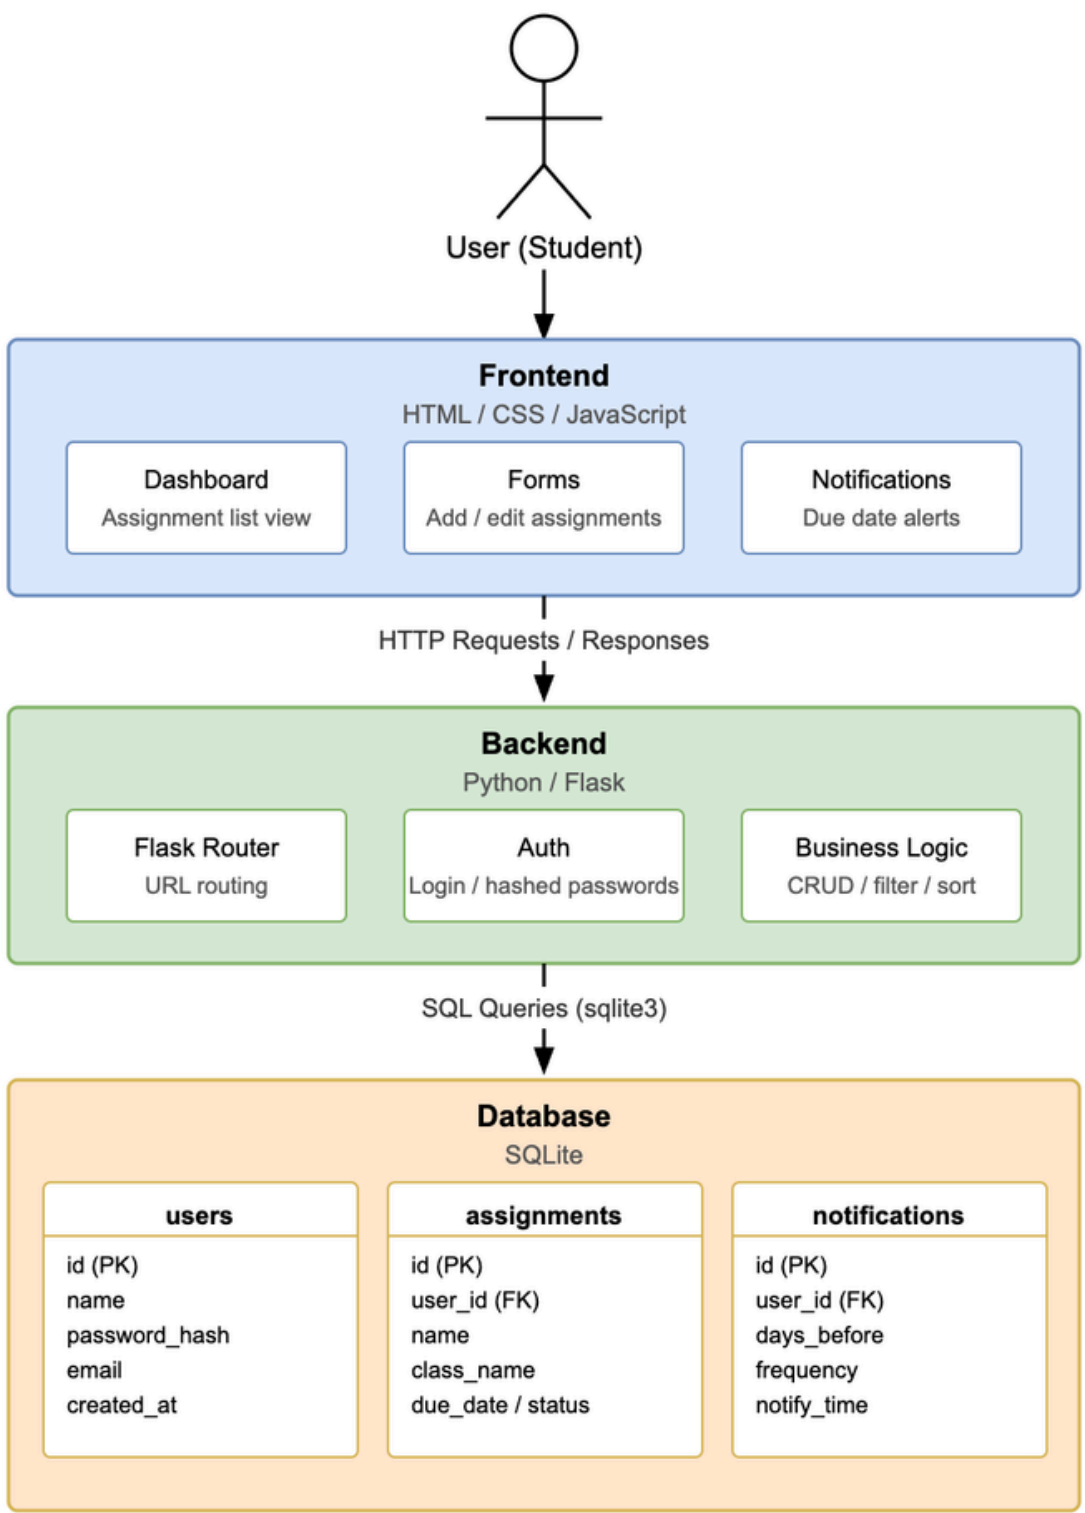

- **Managing Assignments**

- Users can add assignments they wish to track
- Users can edit existing assignments, and changes will immediately be viewable on the user dashboard
- Users can delete assignments as needed.

- **Logout**

- Users can log out of the application whenever it is needed.

System Design

User Experience Approach

We want the UI to be clear enough that:

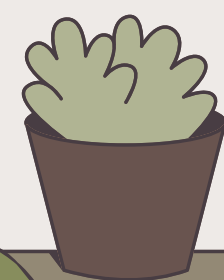

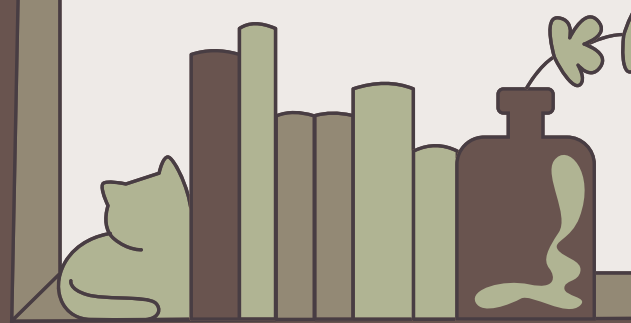

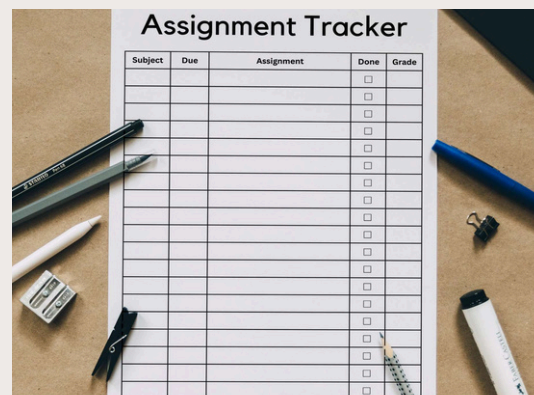

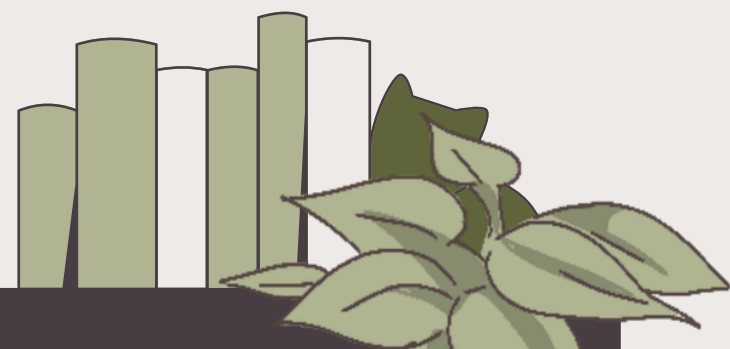

- users see information at a glance
- quickly find desired navigation buttons.

Style sheets achieve these goals in a couple of ways.

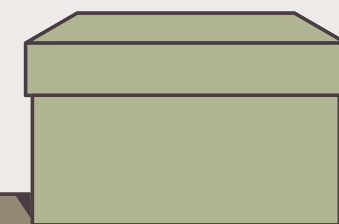

- Color gradient communicates assignment proximity to due date
- Red glow pulsates when assignment is overdue.

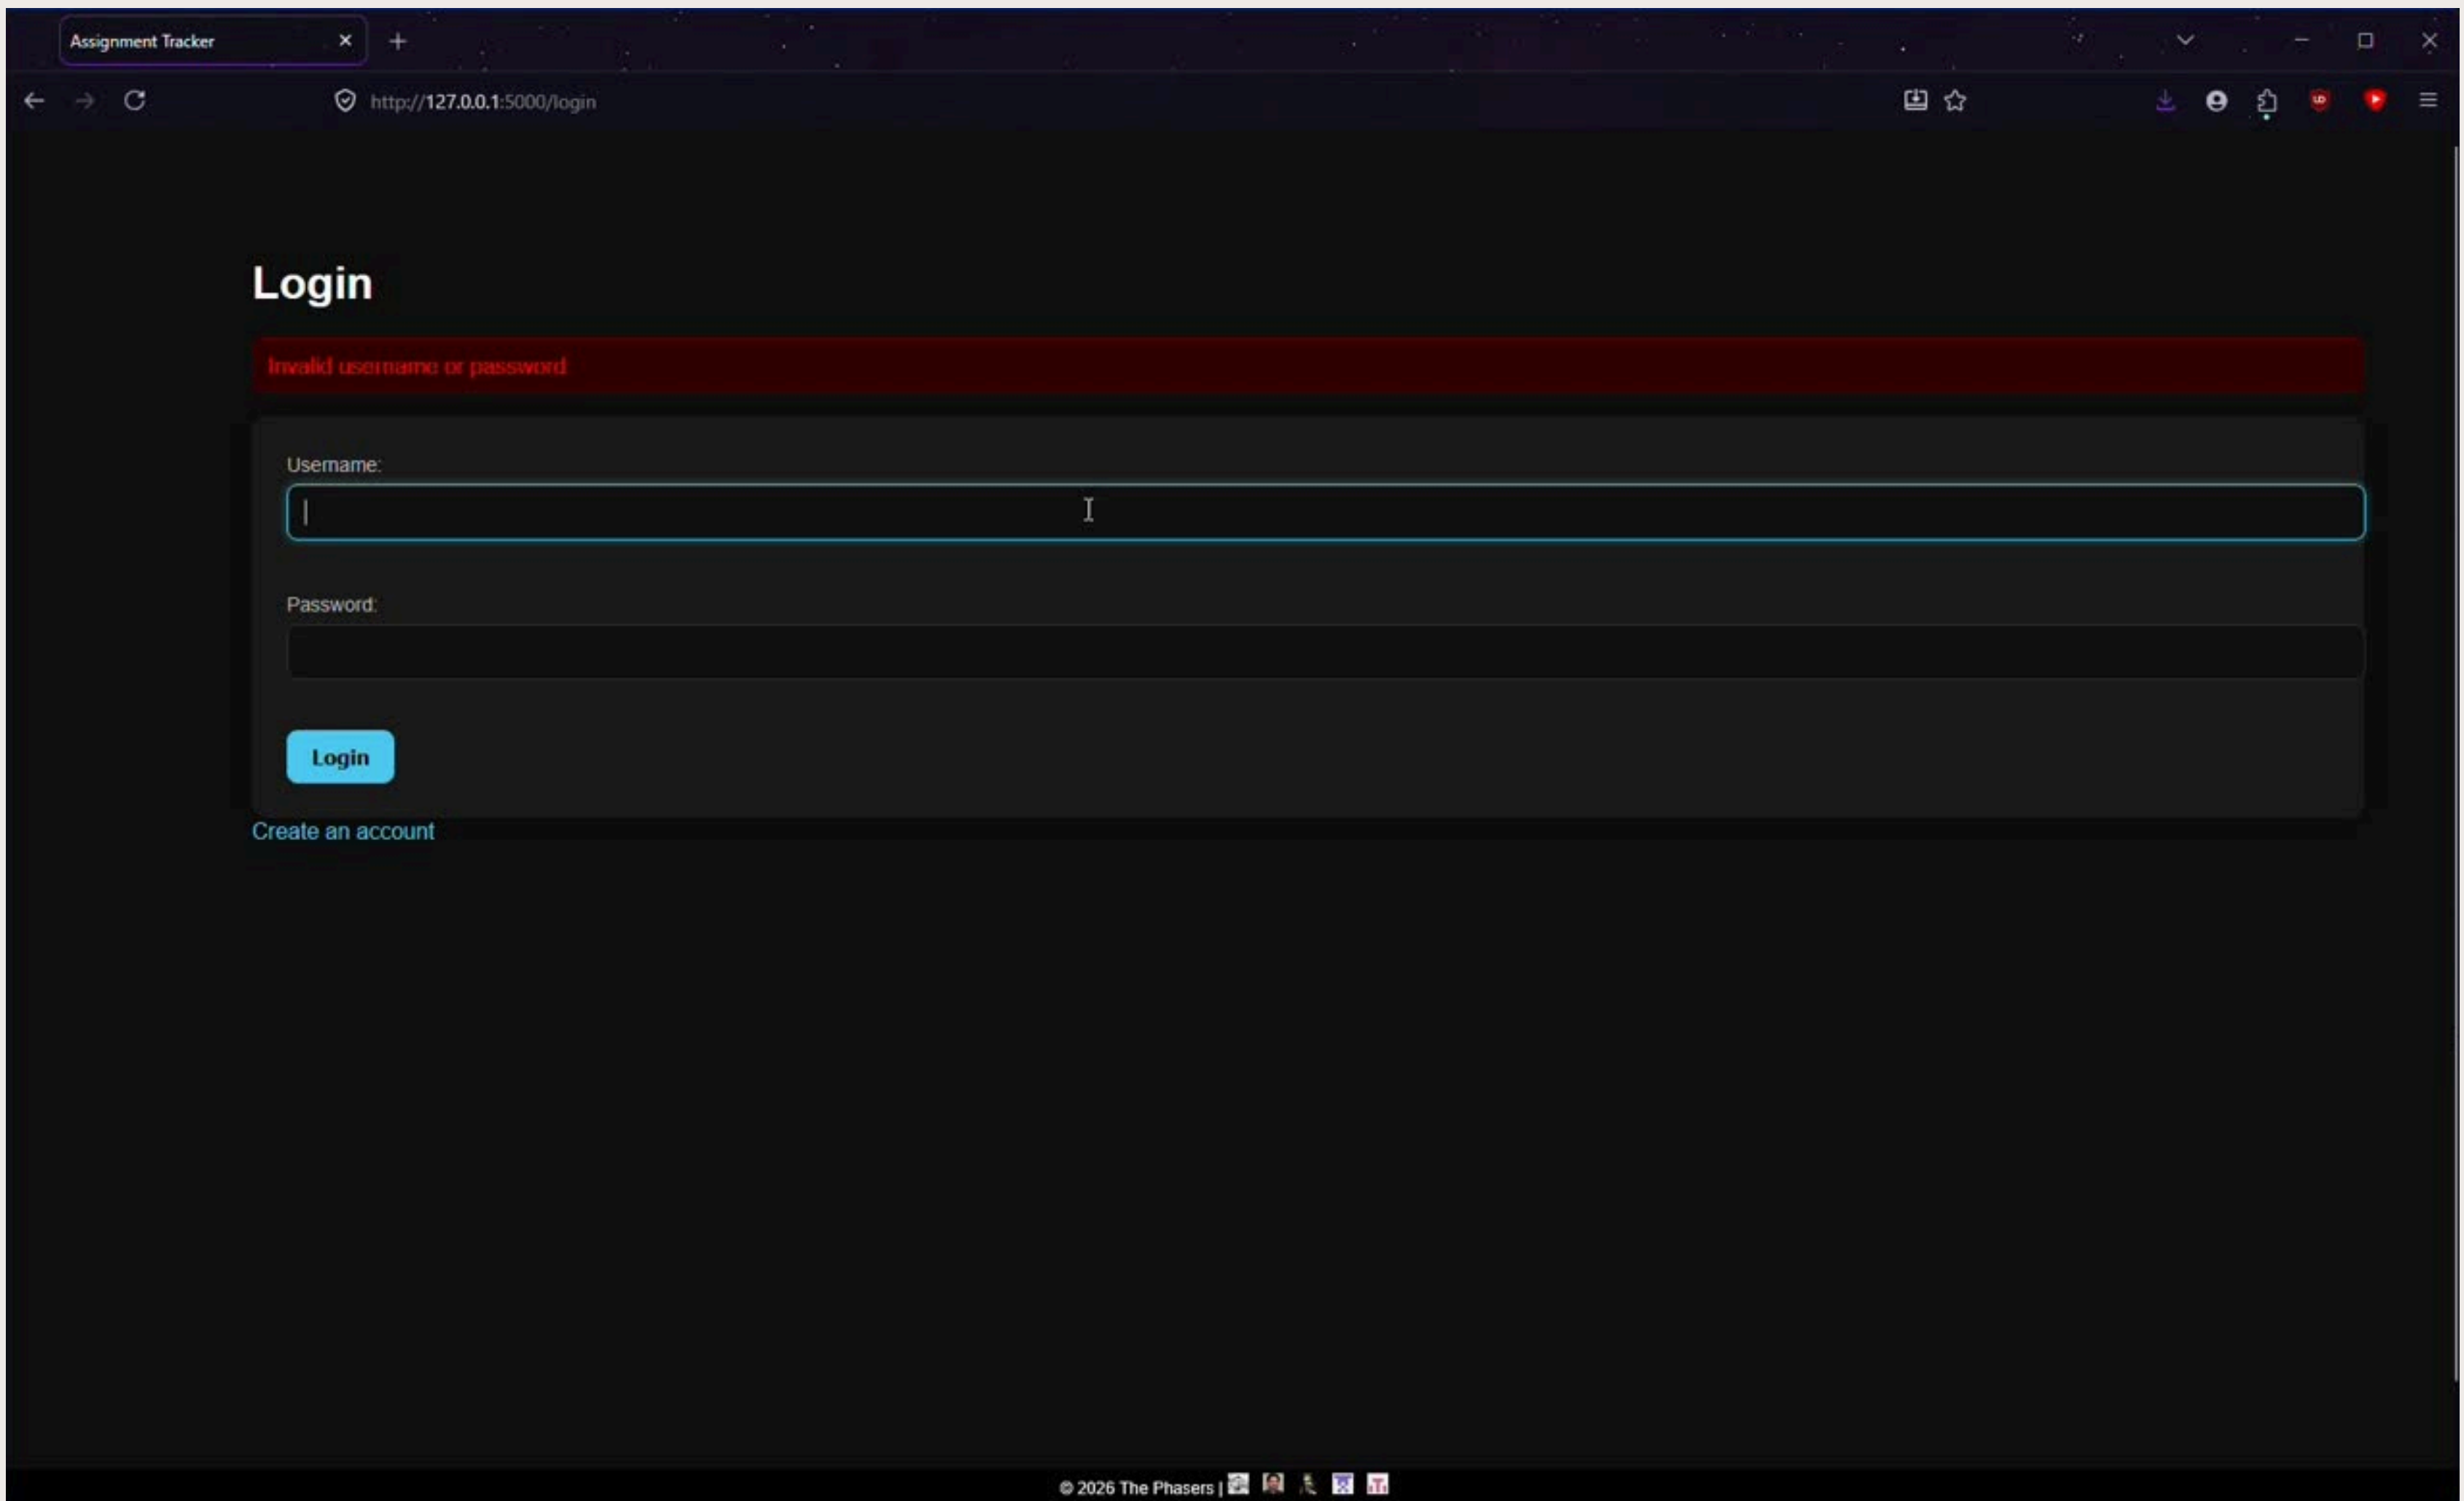

We've also implemented a change to the text font color to increase contrast against both light and dark backgrounds.

Team Reflection

What worked well?

- asynchronous comms (discord & github)
- teamwork

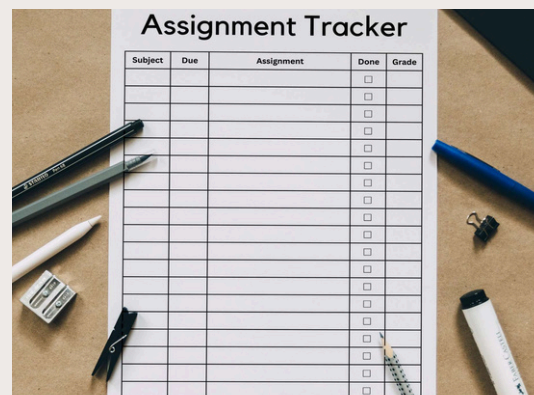

What challenges did we face?

- UI - how to convey information & urgency at a glance

What would we improve?

- add more visual customization
 - light mode, calendar view, custom themes, etc
- ability to link group assignments with other users

Thank You!
